Mathematics: applications and interpretation
Higher level
Paper 1

Friday 6 May 2022 (afternoon)

Candidate session number

--	--	--	--	--	--	--	--	--	--

2 hours

Instructions to candidates

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- A graphic display calculator is required for this paper.
- Answer all questions.
- Answers must be written within the answer boxes provided.
- Unless otherwise stated in the question, all numerical answers should be given exactly or correct to three significant figures.
- A clean copy of the **mathematics: applications and interpretation formula booklet** is required for this paper.
- The maximum mark for this examination paper is **[110 marks]**.

2. [Maximum mark: 5]

The ticket prices for a concert are shown in the following table.

Ticket Type	Price (in Australian dollars, \$)
Adult	15
Child	10
Student	12

- A total of 600 tickets were sold.
- The total amount of money from ticket sales was \$7816.
- There were twice as many adult tickets sold as child tickets.

Let the number of adult tickets sold be x , the number of child tickets sold be y , and the number of student tickets sold be z .

- (a) Write down three equations that express the information given above. [3]
- (b) Find the number of each type of ticket sold. [2]

5. [Maximum mark: 7]

A ball is dropped from a height of 1.8 metres and bounces on the ground. The maximum height reached by the ball, after each bounce, is 85% of the previous maximum height.

diagram not to scale

- (a) Show that the maximum height reached by the ball after it has bounced for the sixth time is 68 cm, to the nearest cm. [2]
- (b) Find the number of times, after the first bounce, that the maximum height reached is greater than 10 cm. [2]
- (c) Find the total **vertical** distance travelled by the ball from the point at which it is dropped until the fourth bounce. [3]

6. [Maximum mark: 8]

A vertical pole stands on a sloped platform. The bottom of the pole is used as the origin, O, of a coordinate system in which the top, F, of the pole has coordinates (0, 0, 5.8). All units are in metres.

diagram not to scale

The pole is held in place by ropes attached at F.

One of these ropes is attached to the platform at point A(3.2, 4.5, -0.3). The rope forms a straight line from A to F.

- (a) Find \vec{AF} . [1]
- (b) Find the length of the rope. [2]
- (c) Find \hat{FAO} , the angle the rope makes with the platform. [5]

7. [Maximum mark: 4]

A slope field for the differential equation $\frac{dy}{dx} = x^2 + \frac{y}{2}$ is shown.

Some of the solutions to the differential equation have a local maximum point and a local minimum point.

- (a) (i) Write down the equation of the curve on which all these maximum and minimum points lie.
- (ii) Sketch this curve on the slope field. [2]

The solution to the differential equation that passes through the point $(0, -2)$ has both a local maximum point and a local minimum point.

- (b) On the slope field, sketch the solution to the differential equation that passes through $(0, -2)$. [2]

(This question continues on the following page)

10. [Maximum mark: 7]

The following Argand diagram shows a circle centre 0 with a radius of 4 units.

A set of points, $\{z_\theta\}$, on the Argand plane are defined by the equation

$$z_\theta = \frac{1}{2}\theta e^{i\theta}, \text{ where } \theta \geq 0.$$

(a) Plot on the Argand diagram the points corresponding to

(i) $\theta = \frac{\pi}{2}$.

(ii) $\theta = \pi$.

(iii) $\theta = \frac{3\pi}{2}$.

[3]

Consider the case where $|z_\theta| = 4$.

(b) (i) Find this value of θ .

(ii) For this value of θ , plot the approximate position of z_θ on the Argand diagram.

[4]

(This question continues on the following page)

14. [Maximum mark: 8]

(a) (i) Expand $\left(\frac{1}{u} + 1\right)^2$.

(ii) Find $\int \left(\frac{1}{(x+2)} + 1\right)^2 dx$.

[4]

The region bounded by $y = \frac{1}{(x+2)} + 1$, $x = 0$, $x = 2$ and the x -axis is rotated through 2π about the x -axis to form a solid.

(b) Find the volume of the solid formed. Give your answer in the form $\frac{\pi}{4}(a + b \ln(c))$, where $a, b, c \in \mathbb{Z}$.

17. [Maximum mark: 8]

A function f is of the form $f(t) = pe^{q\cos(rt)}$, $p, q, r \in \mathbb{R}^+$. Part of the graph of f is shown.

The points A and B have coordinates $A(0, 6.5)$ and $B(5.2, 0.2)$, and lie on f .

The point A is a local maximum and the point B is a local minimum.

Find the value of p , of q and of r .
