

2.1 Metabolism & Water

Question Paper

Course	DP IB Biology
Section	2. Molecular Biology
Topic	2.1 Metabolism & Water
Difficulty	Medium

Time allowed: 20

Score: /10

Percentage: /100

Which of the following sequences of atomic symbols best represents the makeup of the elements in the human body, **in descending order**, by mass?

- **A** O, C, H, N, S, P
- **B** C, H, O, N, S, P
- **C** O, C, N, H, Na, K
- **D** C, H, O, N, K, S

[1 mark]

Question 2

Which property of carbon makes it a good basis for organic molecules?

- **A** It exists in hard and stable forms like graphite and diamond.
- **B** It forms a varying number of covalent bonds to other atoms.
- **C** It can form millions of different compounds in association with hydrogen and oxygen.
- **D** It forms strong, ionic bonds with other atoms.

The four statements below are examples of the two types of metabolism, anabolism and catabolism.

- A Deamination of polypeptides to form urea.
- **B** Formation of glycosidic bonds between glucose and fructose.
- **C** Depletion of fat stores during a period of starvation.
- **D** Anaerobic respiration.

Which **one** of the statements represents a type of metabolism which is different to the other three options?

[1 mark]

Question 4

Which of the following are **not** examples of hydrogen bonding?

- A Base-pairing between two strands of DNA.
- **B** The forces that hold water molecules together.
- **C** The bond that joins one nucleotide to its neighbour in a strand of DNA.
- **D** Interactions between water and the polar R groups of certain amino acids.

Water (H₂O) is a polar molecule, whereas methane (CH₄) is nonpolar. Which of the properties of methane is explained by methane's lack of polarity?

- A Low molecular weight.
- **B** Low boiling point.
- C Flammability.
- **D** Greenhouse gas effect.

[1 mark]

Question 6

Which of the following observations is **not** explained by water's high latent heat of vaporisation and specific heat capacity?

- A lce is less dense than liquid water, so it floats on water.
- **B** Water exists in all three physical states (solid, liquid and gas) on Earth.
- **C** A small volume of water can dissipate a lot of heat from an organism.
- **D** A lot of heat energy is required to raise the temperature of water.

Which row of the table best describes the events of polypeptide synthesis?

	Type of reaction		ATP requirement	Location in cell
A	anabolic	condensation	ATP not required	mitochondria
В	anabolic	hydrolysis	ATP not required	cytoplasm
С	anabolic	condensation	ATP required	cytoplasm
D	catabolic	condensation	ATP required	mitochondria

Which row of the table lists the four common metabolites in **decreasing** order of solubility in water?

- A oxygen → sodium chloride → cholesterol → hydrophobic amino acid
- B sodium chloride → oxygen→ hydrophobic amino acid → cholesterol
- **C** hydrophobic amino acid → oxygen → sodium chloride → cholesterol
- **D** sodium chloride → hydrophobic amino acid → oxygen → cholesterol

[1 mark]

Question 9

Which of the following properties of water are a result of intermolecular forces?

- I. High surface tension.
- II. Good solvent.
- III. Cohesiveness.
- IV. High specific heat capacity.
- A I and II
- B I, II and III
- C I, II and IV
- D All

Which of the following properties of water stops enzymes from being denatured during transpiration?

- I. Water retains a lot of heat.
- II. Water forms hydrogen bonds with other polar and nonpolar molecules.
- **III.** A lot of heat is required to evaporate water.
- IV. Water is cohesive.
- A I only
- B I and II
- C II, III and IV
- **D** III only
