

2.6 Transcription & Translation

Question Paper

Course	DP IB Biology
Section	2. Molecular Biology
Topic	2.6 Transcription & Translation
Difficulty	Hard

Time allowed: 10

Score: /5

Percentage: /100

Question 1

A polypeptide has the following amino acid sequence:

alanine - alanine - valine - lysine - valine - serine

The table below gives the base sequences for the DNA triplets of each amino acid.

Amino acid	DNA triplet	
serine	TCG	
valine	GTA	
lysine	AAA	
alanine	GCT	
stop	TAA	

A mutation in the DNA coding for this polypeptide chain caused the tenth nucleotide to change from an A to a T.

Which of the following would represent the amino acid sequence in the polypeptide after the mutation occurred?

- A. alanine alanine valine lysine valine serine
- B. alanine alanine valine stop valine serine
- C. alanine alanine valine
- D. alanine alanine valine serine valine serine

[1 mark]

Question 2

Which of the following processes involve **both** DNA and RNA?

- I. Replication
- II. Transcription
- III. Translation
- IV. Protein synthesis
- A. I and II
- B. I, II and IV
- C. III only
- D. II and IV

Question 3

The following steps are involved in the process of replicating DNA by polymerase chain reaction (PCR).

- 1. The temperature is increased to 72°C to allow Taq polymerase to bind to DNA
- 2. A new complementary strand of DNA is produced
- 3. The temperature is raised to 95°C to cause denaturation of the DNA molecule
- 4. Primers attach to the ends of single strands of DNA by hydrogen bonding
- 5. The temperature is decreased to about 54°C

Which of the following represents the correct order of the steps?

 $A.1\rightarrow3\rightarrow4\rightarrow5\rightarrow2$

 $B.3 \rightarrow 5 \rightarrow 4 \rightarrow 1 \rightarrow 2$

 $C.1 \rightarrow 3 \rightarrow 5 \rightarrow 4 \rightarrow 2$

 $D.3 \rightarrow 4 \rightarrow 5 \rightarrow 1 \rightarrow 2$

Question 4

A short section of mRNA that was produced after transcription occurred has the following base sequence:

AAACUUCUCAUAGAACGG

The following table shows the base sequence for codons and the corresponding amino acids that they code for.

		Second Base					
		U	С	Α	G		
Base	U	Phenylalanine (Phe/F) UUA Leucine (Leu/L)	CCU Serine (Ser/S)	AUU Tyrosine ACU (Tyr/Y) AAU - STOP AGU - STOP	GUU Cysteine GCU (Cys/C) GAU - STOP GGU - Tryptophan (Trp/W)	U C A G	
	С	CUU Leucine (Leu/L)	CUC Proline (Pro/P)	AUC Histidine (His/H) AAC Glutamine (Gln/Q)	GUC GCC Arginine (Arg/R)	U C A	Base
First	A	AUU Isoleucine (Ile/I) AUA AUG - Methionine (Met/M)	CCA Threonine (Thr/T)	AUA Asparagine (Asn/N) AAA Lysine (Lys/K)	GUA Serine (Ser/S) GAA Arginine (Arg/R)	U C A	Third Base
	G	GUU Valine GUA (Val/V) GUG	CUG CCG CAG (Alanine (Ala/A)	AUG Aspartic acid (Asp/D) AAG Glutamic acid (Glu/E)	GUG GCG GAG GGG	U C A G	

Which of the following would represent the correct amino acid sequence coded for by this section of mRNA?

- A. Lysine Leucine Proline Asparagine Glycine Alanine
- B. Lysine Phenylalanine Proline Lysine Glycine Alanine
- C. Lysine Leucine Threonine Asparagine Arginine Arginine
- D. Lysine Leucine Proline Asparagine Arginine Alanine

Question 5

A polypeptide has the following amino acid sequence:

histidine - glutamine - lysine - alanine - valine - histidine - valine

The table below gives the tRNA anticodons for each amino acid.

Amino acid	tRNA anticodons	
histidine	CAU	
valine	GUA	
lysine	AAA	
alanine	GCU	
glutamine	CAG	

A mutation causes the 18th base in the DNA sequence to be deleted.

Which of the following would represent the amino acid sequence after this deletion?

- A. histidine glutamine lysine alanine valine histidine
- B. histidine glutamine lysine alanine valine
- C. histidine glutamine lysine alanine valine glutamine
- D. histidine glutamine lysine alanine valine histidine valine
